TO: Minerals File

FROM: Doug Jensen, Reclamation Specialist *D. Jensen*

RE: Site Inspection, Brown's Canyon Rock Quarry, B.M.W. Stone Inc., S/043/021, Summit County, Utah

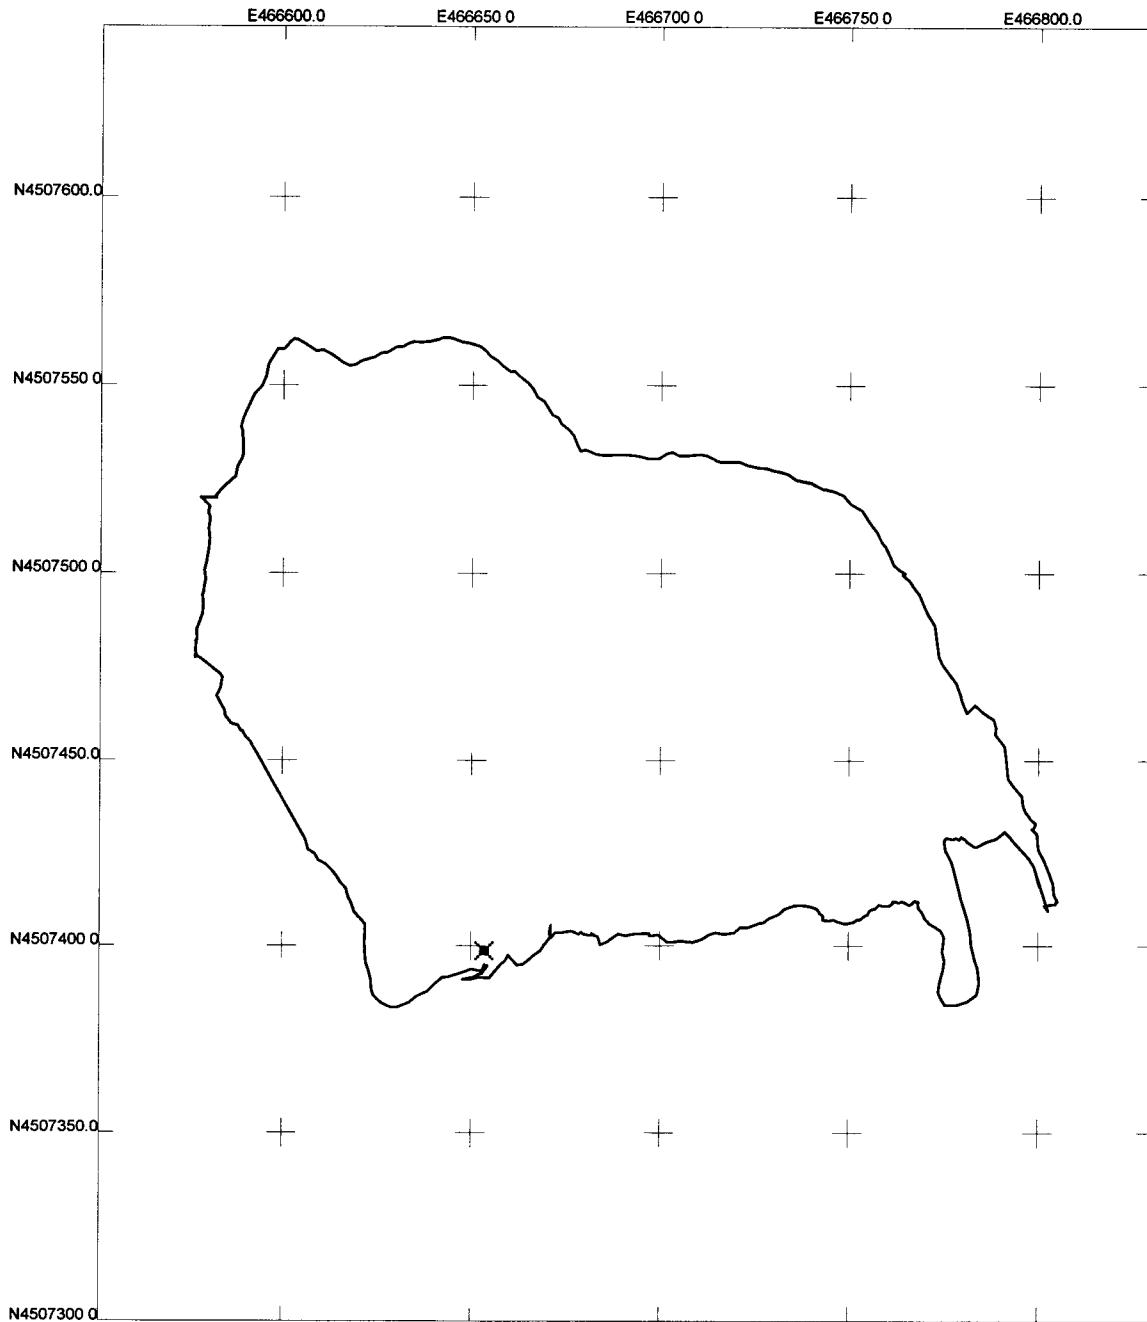

Date of Inspection: September 15, 1999
Time of Inspection: 1200 Noon
Conditions: Warm and Clear
Participants: Lynn Kunzler and Doug Jensen, DOGM

Purpose of Inspection: Site Inspection and GPS of Disturbance

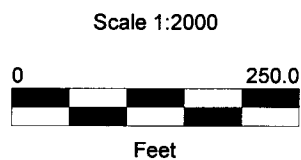

When we arrived on site there were five to six people working around the area. This area is very active with several trucks working the site along with two trackhoes and a loader. There was a fairly large lay-down area that contained 50 to 75 pallets of stone awaiting shipment. The equipment at the site was being used to load trucks on the Park City Mill, possibly some of the pallets of material located in this area belongs to BMW. This area had an entrance gate below the Park City Mill and appeared to be locked on occasion, although it was not located at the time of our visit. There is a large dump of waste materials below the present working area.

The GPS unit was used to measure the total disturbance. The survey encompassed the working area and the waste dump. There were no access roads into the site due to the proximity of this site to the Park City Mill. The GPS survey shows that the total disturbance for this site was 6.44 acres. This acreage is over the five acre threshold allowed by the small mine permit. Reclamation of the site to alleviate this issue will be difficult because most of the site is presently active, either due to mining or storage.

The operator will be contacted by letter to inform him that his permit is potentially in non-compliance due to the total disturbance. He will be given the opportunity to reclaim to reduce the overall size of the site to less than five acres or to apply for a large mine permit. At that time he will be informed that any future expansion of this area is prohibited until such time as the non-compliance issue is addressed.
